

GoSaySo helps students practice high-stakes communication with confidence while protecting their privacy. Our platform is used with schools and is designed for students aged 13 and older. We minimize the personal information we handle, we never sell it, and we never use student practice content to train AI models.

Student Login & Identity

- Students sign in using an anonymous credential (a username and password) that we issue to the school, which the school passes to the student.
- This credential does not contain a student's name, home address, or personal email, and is not created from or linked to a student's real-world identity.
- The school controls the connection between a login and a specific student.
- Practice records and reports are associated with these credentials, not with student names.

Reporting & Distribution

- Individual and summary reports are delivered to the designated mentors or administrators at the school.
- Reports are provided to the school, which distributes them to families — reports are never delivered to the student.
- GoSaySo does not hold parent or guardian contact information, and does not maintain any mapping between a student and a parent's email.

Information Handling & PII Minimization

- Before a practice answer is analyzed or stored, our system automatically detects and removes the names of third parties (such as teammates, teachers, or family members) and replaces them with neutral labels.
- This removes other people's names; it does not remove the name of a school or town, and it does not make an answer fully anonymous.
- We keep student answer content out of our operational logs.
- We use no third-party advertising or marketing integrations.

Artificial Intelligence & Language-Model Safeguards

- GoSaySo uses API-based AI services to score written answers and to transcribe spoken responses.
- Student content is never used to train AI models, and is never sold, shared, or combined with other data.
- Our AI provider retains submitted content only briefly — up to 30 days — for safety and abuse monitoring, after which it is deleted.
- A signed data-processing agreement governs this provider, under which it acts only on our instructions as a service provider.
- Third-party names are removed before any answer reaches the AI provider.

Data Storage & Security

- Student practice data is stored in Google Workspace, configured so that the data is stored at rest in the United States.

- Data is encrypted in transit (HTTPS); our storage provider encrypts data at rest.
- Access to student data is restricted to what is necessary to operate and secure the service.

Retention & Deletion

- We keep student practice data for as long as the school uses GoSaySo.
- We delete student data at the school's request, or when the school's engagement with GoSaySo ends.
- Our AI provider's short retention window is described above.

Education Privacy (FERPA & State Law)

- GoSaySo is intended for students aged 13 and older; we do not knowingly collect information from children under 13.
- When used by a school, GoSaySo acts as a "school official" with a legitimate educational interest under FERPA, processing data under the school's direction and for its educational purposes.
- We are prepared to sign district and state student-data privacy agreements, including the SDPC National Data Privacy Agreement (NDPA), where required.
- We follow FERPA's core principles: data minimization, transparency, and access & deletion under the school's control.

Contact
